Project Design Phase

Problem – Solution Fit

Problem – Solution Fit

The Problem-Solution Fit simply means that you have found a problem with your customer and that

the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs,

marketers and corporate innovators identify behavioral patterns and recognize what would work

and why

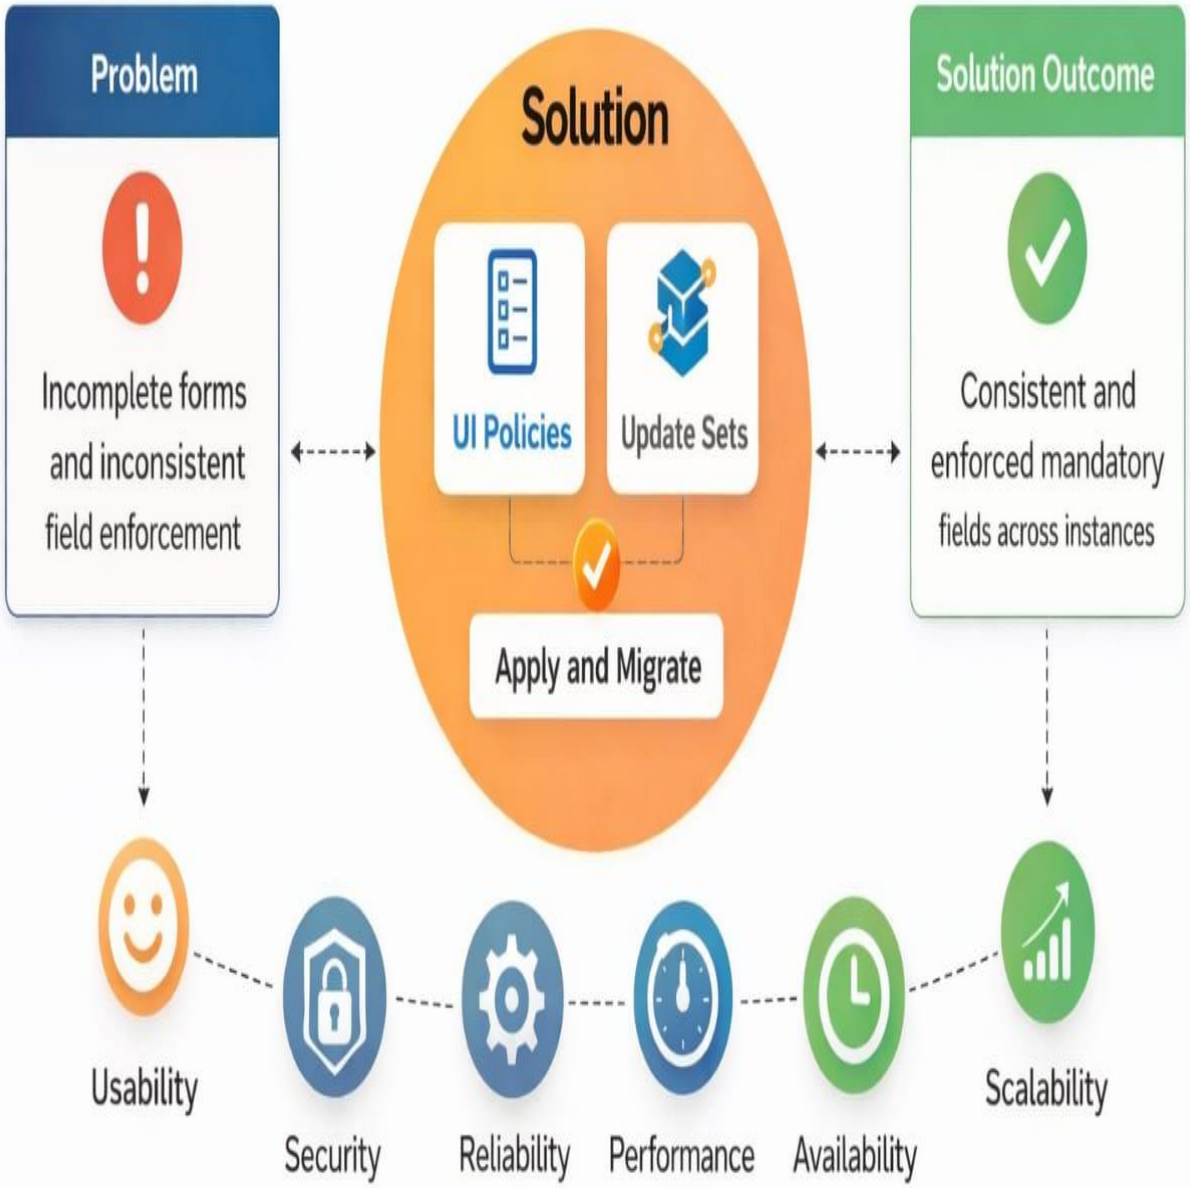
Purpose:

- ❑ **Solve complex problems in a way that fits the state of your customers.**
- ❑ **Succeed faster and increase your solution adoption by tapping into existing mediums and**

  channels of behavior.
- ❑ **Sharpen your communication and marketing strategy with the right triggers and messaging.**

Problem - Solution Fit

Enforcing Mandatory Fieldds Using UI Policies and Migrating ring Changes with Update Sets



Project Design Phase

Proposed Solution

Enforcing Mandatory Fields Using UI Policies and Migrating Changes with Update Sets

S.No.	Parameter	Description
1	**Problem Statement** (Problem to be solved)	In many systems, users may submit forms without filling all required fields, leading to incomplete or inconsistent data. Additionally, changes made in one environment (like development) are difficult to move accurately to another (like production) without a proper migration method.
	Idea / Solution Description	Use UI Policies to make specific fields mandatory based on conditions, ensuring users can provide all required information before submission. Use Update Sets to capture configuration changes and migrate them safely from one instance to another (like production).
	Novelty / Uniqueness	Combines dynamic form validaton (UI Policies) with structured change management (Update Sets). This ensures both data quality and smooth deployment, reducing manual errors and improving system reliability.
	Social Impact / Customer Satisfaction	Improves user experience by guiding users to enter correct data. Reduces errors, increases efficiency, and ensures reliable information, leading to better customer satisfaction and trust in the system.
	Business Model (Revenue Model)	Helps organizations save costs by reducing data errors and rework. Improves productivity and system efficiency, which indirectly increases revenue. Can be part of enterprise IT service management solutions.
	Scalability of the Solution	Highly scalable as UI Policies can be applied across multiple forms and modules, and Update Sets support easy migration across multiple environments. Suitable for both small and large organizations.

Project Design Phase

Solution Architecture

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions.
